# Metal & Semimetallic Gasket

**NIPPON VALQUA INDUSTRIES, LTD.**  
<http://www.valqua.co.jp>

Metal and semimetallic gaskets are used in environments where extreme temperatures and pressures prohibit the use of non-metallic gaskets.

Metal and semimetallic seals are used in a wide range of applications for various industries. These sectors include:

oil refining, petrochemical, inorganic chemicals, thermal power generation, nuclear power generation, vessels, automobiles, aviation and numerous other industries.

Advancements in facilities and machine technology demand more reliable gasket performance.

This catalog is intended to introduce the various types, designs, materials, and dimensions of VALQUA's metal and semimetallic gaskets.

We hope this catalog will aid you in determining the most suitable sealing solution for your application needs.

# TRYPACK

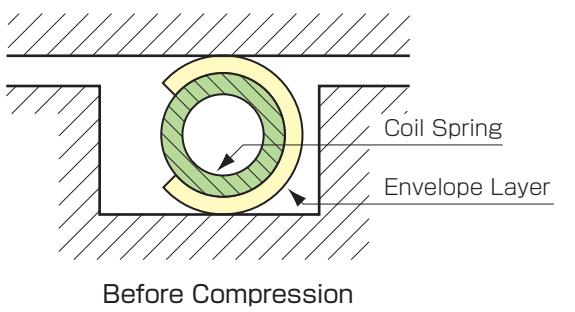

## VALQUA No. 3645/3645LS

TRYPACK is an O-ring shaped gasket with an inner coil spring for elasticity and a metallic outer layer for sealing and/or stress distribution. Compared to a conventional metal gasket, TRYPACK provides greater compression recovery and therefore is able to seal even under lower loads. Additionally, TRYPACK retains the advantages of metal seals, enabling it to withstand extreme temperature ranges.

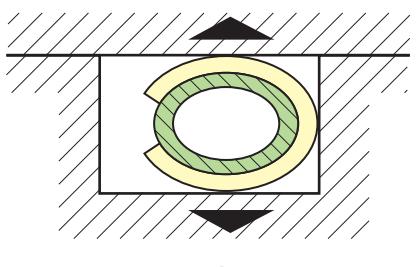

Even in ultra high vacuum environments where rubber and hollow O-rings may not provide adequate performance, TRYPACK maintains excellent sealing across a wide range of temperatures.

### • Features

- 1) Conforms to the sealing surface for excellent vacuum sealing.
- 2) Vacuum sealing performance is retained even during compression recovery.
- 3) Applicable from very low to high temperatures.
- 4) High baking temperature allows for use in vacuum environments where rubber O-rings are not applicable.
- 5) Metallic construction minimizes degradation from radiation and outgassing.
- 6) Resistance to induced radiation, low temperature, and outgassing make it appropriate for Aluminum lines. Tightening will not scratch or damage the opposing flange surface.
- 7) Only the end cross sections are welded(upset butt welding)for the coil spring, preserving structural and mechanical continuity(butt welding is used for cross sections above 1.7mm in diameter).
- 8) Seals with custom configurations are possible.

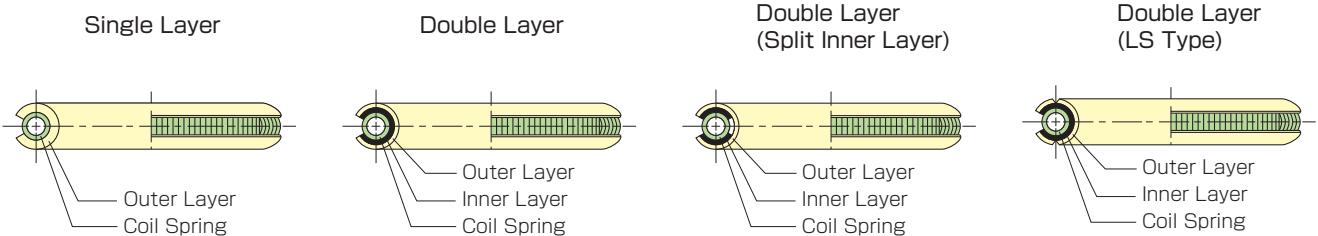

Before Compression

During Operation

### • Product Types

### • Materials

Component	Material	Frequency of Use	Function
Outer Layer	Aluminum (A1050P)	◎	Sealing
	Nickel (NLCP, NNCP)	◎	
	Silver	○	
	Stainless Steel (SUS304L, SUS316L)	○

◎ : frequently used ○ : used with some frequency △ : used only for custom applications

### • TRYPACK Single Layer

#### VALQUA No. 3645

In this gasket a coil spring is covered in a single layer.

Due to the continuous stress distribution of the spring, a wide range of applications from low pressures to extreme vacuums is possible.

#### ● Dimensions and Configurations

Dimensions are based on JIS B 2290 standard vacuum flange dimensions (see page 35). For applications involving sealing with ultra low temperature fluids, JIS B 2210, JPI-7S-15 based dimensions are also defined (see page 35). Other dimensions and configurations are available upon request.

#### ● Applications

TRYPACK is used for the following industries and applications: aerospace, semiconductor, electronics, nuclear energy, accelerators, molding machines, and other connectors and valves.

### • TRYPACK Double Layer

#### VALQUA No. 3645

An inner layer is inserted between the coil spring and outer layer in order to uniformly distribute the force exerted by the spring across the outer layer. This provides stable and high sealing performance over extended periods of time at high temperatures. For added elasticity, the inner skin may be split into upper and lower sections.

#### ● Dimensions and Configurations

Dimensions are defined in the same manner as the single layer type. Information for non standard flange configurations is available upon request.

#### ● Applications

Uses are similar to those of the single layer type. The double layer type is often preferred for locations where extended seal life is required.

### • TRYPACK Low Load Tightening TRYPACK LS

#### VALQUA No. 3645LS

The V-shaped grooves on the upper and lower surfaces allow the seal to readily conform to the opposing surface. Sealing is achieved even under low tightening loads.

#### ● Dimensions and Configurations

Dimensions are defined in the same manner as the single and double layered types. Information for non standard flange configurations is available upon request.

#### ● Applications

Uses are similar to those of the double layer type. The TRYPACK LS is often preferred for locations where extended seal life or high temperature resistance is required.

## • Ordering Information for TRYPACK

### ■ Part Number, Configuration and Material Chart

Part Number	Configuration					Material
	Shape	Cross Section	Outer Layer	Spring + Inner Layer	Special Specifications	
VALQUA No. 3645	Standard : 3645 Set : 3645S <sup>(1)</sup>	Circle (Z) Track-Shaped Oval (C) Rectangular (E) Other (X)	· Single Layer Open OD (A) Open ID (B) · Double Layer Open OD (C) Open ID (D) · Double Layer with Split Inner Layer Open OD (E) Open ID (F) Other (F)	Aluminum (A1050P) (A) SUS304 (E) SUS304L (L) SUS316 (G) SUS316L (H) Nickel (N) Copper(C1100)(C) Silver (V) Other (X)	SUS304+None (4) Inconelx750+None (7) SUS304+SUS304 (A) SUS304+SUS316 (B) SUS304+Inconel 600 (C) Inconelx750+ SUS304 (E) Inconelx750+ SUS316 (F) Inconelx750+ Inconel600 (G) Other (X)	None (Z) Degreasing (B) Other (X)

Note(1) Product set includes retainers and/or multi-angled rings.

Remarks1. Configurations and materials may be specified using alphanumeric codes shown in parenthesis.

2. For configurations and materials not listed, please consult VALQUA for more information.

3. Please specify orders involving combinations of multi-angled rings and retainers.

(Example) For Circle, Single Layer Open OD, SUS304 Outer Layer, Spring Inconel, No Custom Specifications  
The description would become : VALQUA No. 3645-ZAE7Z

For standard dimensions (see page 35) please specify nominal numbers or nominal dimensions (such as V-70).

For other dimensions please specify actual dimensions (inner diameter and cross section).

### • Design Guide

#### ■ Seal Performance

Sample Single Layer TRYPACK(V-70 : 71mm inner diameter × 3.8mm cross section)  
Outer Layer A1050P  
Coil Spring SUS304-WPB  
Flange SUS304(Rmax 3.2s)  
Leak Rate  $Q \leq 1 \times 10^{-11} \text{ Pa} \cdot \text{m}^3/\text{s}$  He(S<sub>0</sub>~S<sub>1</sub>)

#### ■ Effect of Flange Surface Roughness on Sealing Performance

Surface Roughness	Tightening Load (kN/m)	
	Initial Sealing Point S <sub>0</sub> <sup>(1)</sup>	Sealing Limit Point S <sub>1</sub> <sup>(1)</sup>
0.8s	80~100	30~50
3.2s	70~90	30~50
6.3s	80~120	30~50
(Reference) Stick Finish 6.3s	100~160	30~50

Note(1) S<sub>0</sub>, S<sub>1</sub> are at  $1 \times 10^{-11} \text{ Pa} \cdot \text{m}^3/\text{s}$ .

#### ■ Acceptable Dimensions and Groove Design Standards

CS Diameter d	ID Range D	Groove Depth t±0.1	Groove ID for Vacuum G <sub>1</sub> <sup>+0.6</sup>	Groove OD for Internal Pressure (Ref.) G <sub>2</sub> <sup>+0.6</sup>	Groove Width (Minimum)	Average Tightening Load at Operation Point S (kN/m/kgf/cm)			
						Aluminum	Silver Copper	Nickel Tantalum	Stainless Steel
1.7	5 ~ 50	1.4	D-0.8	D+2d+0.5	2.3	200{200}	220{220}	250{250}	290{300}

8.0	Above 175 <sup>(1)</sup>	7.0	D-1.0	D+2d+1.0	12.0	340{350}	490{500}	—	—
10.0	Above 175 <sup>(1)</sup>	9.0	D-2.0	D+2d+1.0	15.0	390{400}	590{600}	—	—
Recommended Flange Surface Roughness						0.8a	0.4a	0.2a	0.2a

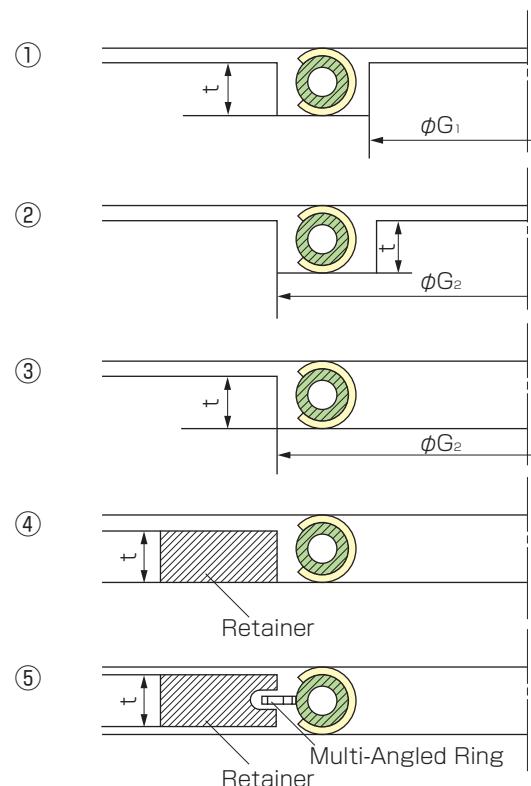

Note(1) Please consult VALQUA concerning dimensions outside specified ranges.

Remarks1. TRYPACK with cross sectional diameters between 3.8~8.0mm may be applied to groove dimensions based on JIS B2290 Vacuum System Flanges (see page 35).

2. This chart applies to gaskets with open OD configurations. Please consult VALQUA for information on open ID configurations.

3. Designs fulfill sealing levels that fall within standard Helium leak detection(HeLD)ranges. For applications outside these limits(e.g.  $10^{-8} \text{ Pa} \cdot \text{m}^3/\text{s}$  levels), please consult VALQUA.

### ■ Flange Types and Recommended Settings (Prior to Tightening)

The required tightening load (W<sub>m</sub>[N]) for sealing negative pressure is:

$$W_m = W_s = \pi (D+d) K$$

Where W<sub>s</sub> : force required to properly close the flange upon the gasket and maintain a seal [N]

D : TRYPACK Inner Diameter [mm]

d : TRYPACK Cross Sectional Diameter [mm]

K : Tightening load required to close the flange with respect to the circumference (average tightening load at point S) [kN/m]

(Reference)

TRYPACK may also be used for sealing against ultra low temperature fluids in low to mid pressure lines under positive pressure.

The required tightening load for positive pressure sealing is:

$$W_m = W_s + W_p$$

Where W<sub>p</sub> : force derived from fluid pressure [N]

$$W_p = \frac{\pi}{4} (D+2d)^2 P$$

P : maximum fluid pressure [MPa]

Remarks1. For vacuum applications, use flange configuration ①, ④ or ⑤

2. For internal pressure applications, use flange configuration ②, ③, ④ or ⑤

3. For applications where groove finish is critical, use flange configuration ③, ④ or ⑤

### ■ Special Gaskets

#### ● Custom Configurations

Oval, rectangular and track-shaped configurations are available. Please refer to the dimensions in the chart below for rectangular and track-shaped configurations.

#### Rectangular Configuration

Cross Sectional Diameter d	Radius of Curvature (ID) R	(Units:mm)	
		Minimum Length per Side L	
3.8	20	50×125	
	25	60×150	
5.6	35	80×175	
	30	70×200	
	50	110×200	

#### Track-Shaped Configuration (Units:mm)

Cross Sectional Diameter d	Minimum Length per Side L
3.8	40×70
5.6	100×200

### ● Cross Sectional Diameter, Inner Diameter and Custom Materials

Please consult with VALQUA for gaskets made to other dimensions or of custom materials.

Other special configurations shown below are also available.

#### (1) Open Inner Diameter

For when the outer diameter is exposed to negative pressure

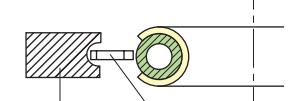

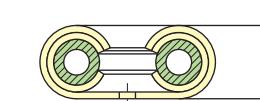

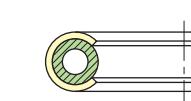

#### (2) Parallel Rings

For when a leak sensor is placed in between the two rings

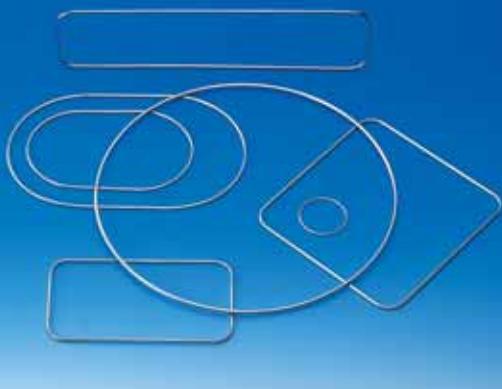

#### (3) Retainer Combination

For enhanced seal reliability

#### For automation and improved ease of handling

A combination with only the TRYPACK and Multi-Angled Ring is also available.

# Metal Hollow O-Ring

VALQUA No.3640/3641

Metal Hollow O-Rings are made by configuring a metal tube into a specified shape. The tube's ends are then welded, polished and finally coated or plated.

It can maintain seals at high temperatures, pressures and vacuum, all at relatively low tightening load. A wide range of configurations is available. This is especially suitable for applications where space is limited and light weight is desired. During the welding process internal uniformity is preserved.

## • Product Types

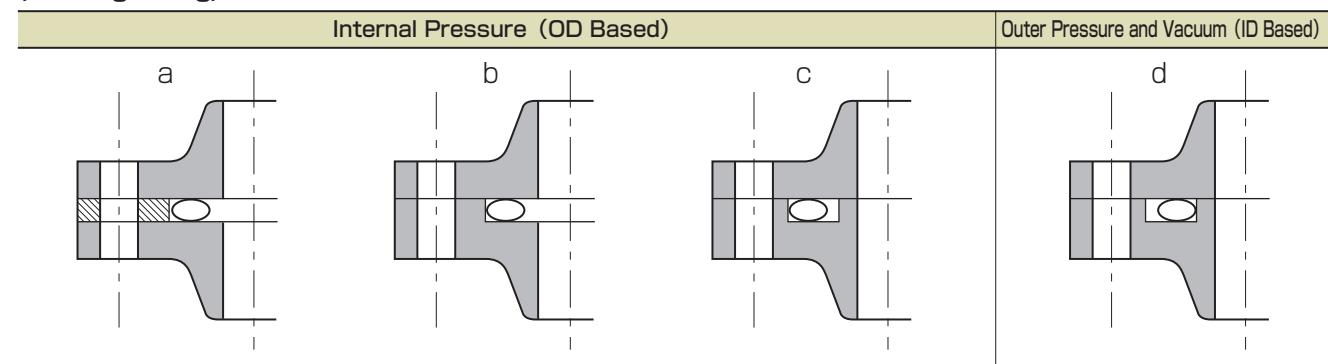

Description	Cross Section	Applicable Range	VALQUA Part Number
Metal Hollow O-Ring (Standard Design)		Vacuum~7MPa	3640
Metal Hollow O-Ring (Balanced Design)		≥7MPa	3641

## • Materials

	Material
Tube	SUS304 SUS316 SUS321 Incoloy 800
Surface Treatment	VALFLON (PTFE) Coating Silver Plating Nickel Plating Copper Plating Gold Plating

## • Flange Types and Recommended Settings

(After Tightening)

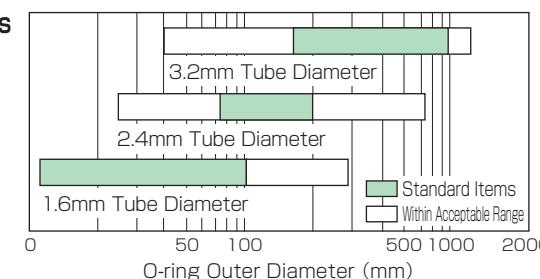

Remarks This chart depicts standard applications.

For applications with external pressures exceeding 0.5MPa(5kgf/cm<sup>2</sup>) or other custom items used in vacuum, ID based standards must be used.

## • Design Guidelines

### ■ Tube Diameter : O-ring Outer Diameter

Range of O-ring Outer Diameters  
for each Tube Diameter

### ■ Tube Thickness : Fluid Viscosity, Operating Pressure / ■ Surface Treatment : Fluid Viscosity, Finish of Matching Surface

Type of Fluid (Viscosity)	Pressure Range	Tube Thickness(mm)	Matching Surface Roughness(Ra)			Tube Diameter (mm)
			Without Coating or Plating	PTFE Coated	Plated	
Vacuum, Gases (Volatile Fluids)	Vacuum <50MPa ≥50MPa	0.5, 0.8	—*	0.8a	0.4a	φ1.6 φ2.4 φ3.2
	≤50MPa ≥50MPa	0.5	0.4a	0.8a	0.4a	
	≤50MPa ≥50MPa	0.25, 0.35, 0.5	0.8a	1.6a	0.8a	
	≤50MPa ≥50MPa	0.5	0.8a	1.6a	1.6a	
(※For vacuum and standard gases VALFLON® coating or plating is required)						

### ■ Tube Material and Surface Treatment : Temperature Range

	Material	Temperature Range <sup>(1)</sup> (°C)
Tube Material	Stainless Steel (SUS304) Stainless Steel (SUS316) Stainless Steel (SUS321) Incoloy 800	-250~540 -250~820 -250~870 -250~980
Surface Treatment	VALFLON PTFE Coating Silver Plating Nickel Plating Copper Plating Gold Plating	-200~260 -250~650 -250~760 -250~400 -250~850

Note(1) Temperature ranges of surface treated seals are determined by the material with the lower maximum temperature(either the seal material or treatment material).

## • Range of Available Sizes

○ : Popular Material ○ : Standard Stock Material

Note(1) Use as reference for corner radius values for Rectangular Type seals.

## • Metal Hollow O-Ring Standard Type

### VALQUA No.3640

No.3640 is a Metal Hollow O-Ring crafted by configuring a metal tube into a desired shape with the two ends welded together. The shape is then finely adjusted before the surface is polished and treated. The seal is suitable for low to mid pressure applications from vacuum( $10^{-10}$ Pa) to 7MPa(70kgf/cm $^2$ ). For grooved flanges the seal may be installed as is, but raised face flanges require a retainer ring.

#### ● Dimensions and Configurations

VALQUA's standard dimensions, groove design standards and tightening load calculations are defined in pages 10, 11, 36.

Dimensions following MS standards or other design requirements may be provided upon request. Oval, angled and other special shapes may also be available upon request.

#### ● Related Standards

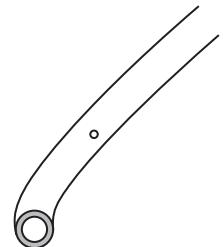

MS9141~2, MS9202~5, MS9371~7, AMS2400, AMS2410, AMS2418, AMS2422, AMS2424, AMS2515, AMS5570, AMS5576, AMS7325, MIL-Q-9858

#### ● Applications

Its unique sealing mechanism and excellent performance make Metal Hollow O-Rings suitable for aircrafts, nuclear reactors, high vacuum devices, internal combustion engines, electronics, heavy duty electrical machinery, hydraulic devices, plastic forming devices, melt spinning devices for artificial fabrics and numerous other applications.

## • Metal Hollow O-Ring Balanced Type

### VALQUA No.3641

No.3641 incorporates pressure balancing holes to the Standard Type. For seals subjected to internal pressure, holes are placed on the inner diameter side. For seals subjected to external pressure, holes are placed on the outer diameter side. This product is well suited for applications involving high pressures above 7MPa (70kgf/cm $^2$ ), however it may be used for lower pressure applications as well.

Our evaluations have shown that No.3641 can withstand fluid pressures of up to 588MPa(6000kgf/cm $^2$ ).

Applicable flanges and their standard dimensions are identical to those of No.3640 (see page 36).

#### ● Dimensions and Configurations

Dimensions and configurations for No.3641 are identical to those of No.3640 (see page 36).

#### ● Applications

Applicable uses for No.3641 are identical to those of No.3640, but especially recommended for locations involving high pressures.

## • Ordering Information for Metal Hollow O-Rings

### ■ Part Number, Configuration and Material Chart

Part Number	Configuration	Material <sup>(3)</sup>			
VALQUA No. 3640	Shape	Cross Section	Tube Material	Surface Treatment	Special Specifications

Balanced : 3641 <sup>(1)</sup> 3641S (Set)					

Notes(1) If clogging due to highly viscous or slurry fluids is a concern, please consult VALQUA.

(2) Product set comes with a retainer and the Metal Hollow O-Rings.

(3) Temperature ranges of surface treated Metal Hollow O-Rings are determined by the material with the lower maximum temperature(either the seal material or treatment material).

Remarks 1. Configurations and materials may be specified using alphanumeric codes shown in parenthesis.

2. For configurations and materials not listed, please consult VALQUA for more information.

(Example) For Balanced Type, Circle, Internal Pressure, SUS304, Silver Plating  
Or · The description would become : VALQUA No.3641-Circle, Internal Pressure, SUS304, Silver Plating  
· VALQUA No.3641-ZNEVZ

### ■ Size Indications

For standard sizes(see page 36)please specify the nominal number for the tube and dimensions. [ex.] A50

For other sizes and configurations, please specify accordingly.

Dimension tolerances for general Metal Hollow O-Rings are based on the outer diameter tolerances.

Should inner diameter tolerance values be a concern(external pressure, vacuum, etc.), please specify accordingly.

If flanges or retainers are required, please specify the configurations, dimensions and materials.

Remarks Nominal dimensions for Metal Hollow O-Rings are based on the bare tube material without surface treatment.  
Please take into account the thickness of the surface treatment(coating / plating)accordingly.

6.4	400~2500	1.6	5.40±0.05	(D-12.8) <sup>+0</sup> <sub>-0.30</sub>	7.36	5.45±0.05	(D-12.9) <sup>+0</sup> <sub>-0.30</sub>	7.46	

Notes(1) For cases where fluid pressure exceeds 50MPa(500kgf/cm), groove and O-ring dimensional tolerances must be less than half of the standard values. Please consult VALQUA for such cases.

(2) Thicknesses of the plating and VALFLON PTFE coating are as follows:

Gold, Silver, Nickel, Copper plating : 0.025mm - 0.040mm

VALFLON PTFE coating : 0.025mm - 0.050mm

(3) Dimensional tolerances for general Metal Hollow O-Rings are based on the outer diameter tolerances. Should inner diameter tolerance values be a concern(external pressure, vacuum, etc.), please specify accordingly.

### ■ Standards for Tightening Load Calculation

#### ● Sealing Positive Pressure

The required tightening load Wm [N] for sealing a maximum fluid pressure of P is :

$$Wm = Ws + Wp$$

Where

$$Ws = \pi(D-d)K$$

$$Wp = \frac{\pi}{4} D^2 P$$

#### ● Sealing Negative Pressure

The required tightening load Wm [N] for sealing negative pressure is :

$$Wm = Ws = \pi(D-d)K$$

Where

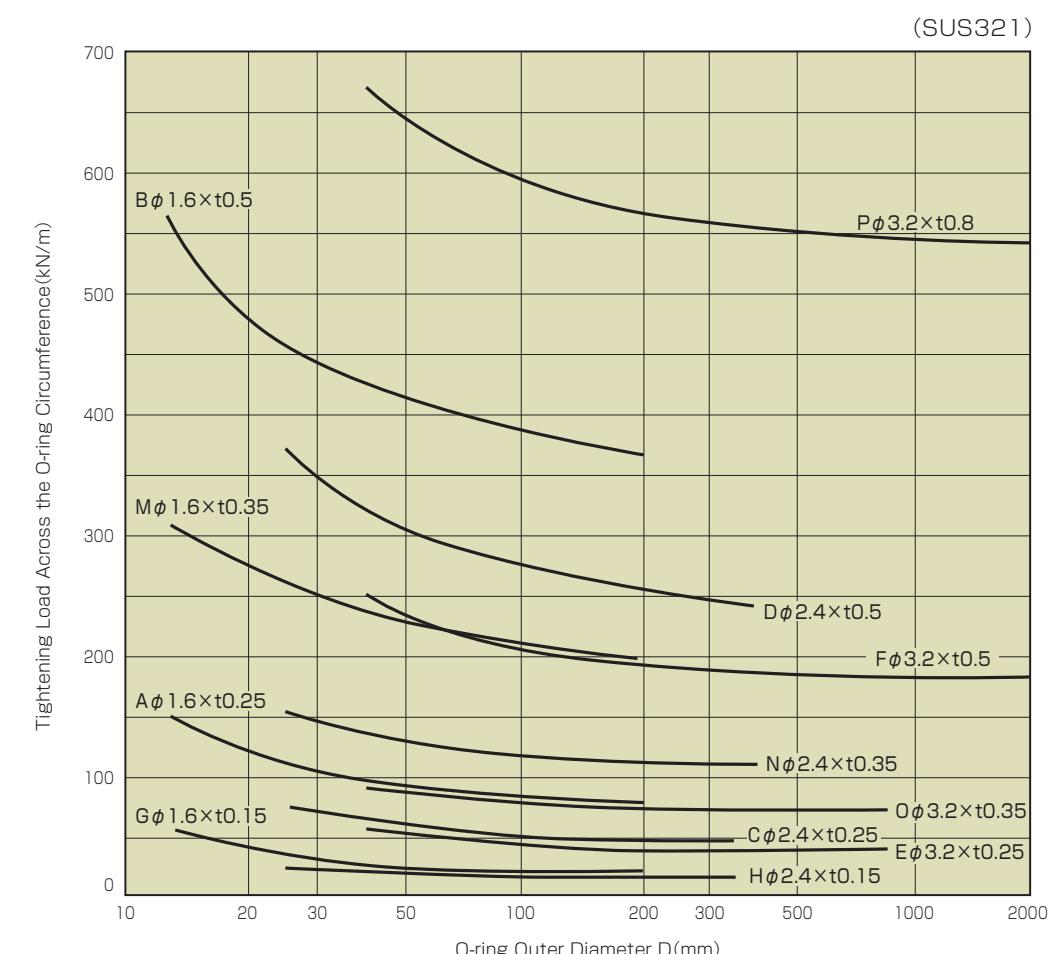

Ws : Force required to fully secure the gasket in the groove to form a seal [N]

Wp : Force from fluid pressure [N]

D : Outer diameter of O-ring [mm]

d : Cross sectional diameter of O-ring [mm]

K : Tightening load across the O-ring circumference [kN/m](see chart below)

# Metal Jacketed Gasket

**VALQUA No.N510/N520/N530/N570/  
N580/N6520/N6580**

Metal Jacketed Gaskets are semimetallic gaskets comprised of a Non-Asbestos cushion core covered in a thin metal layer. Metal Jacketed Gaskets are versatile in both shape and size, and are suited for not only pipes, towers and tanks, but also multi-path, multi-tube heat exchangers, internal combustion engines and compressors. For added sealing performance, variations of these semimetallic gaskets are available by applying the graphite VALQUAFOIL Gathered Tape (VF-70) or the VALQUAFOIL Gasket (VF-30).

## • Product Types

Name	Cross Sectional Configuration	VALQUA Part No.
Metal Jacketed Gasket (All Covered)		N520
Metal Jacketed Gasket (Corrugated, All Covered)		N510
Metal Jacketed Gasket (Half Covered)		N530
Metal Jacketed Gasket (Circle, All Covered)		N570
Metal Jacketed Gasket (Double Covered)		N580
Metal Jacketed Gasket (French Cross-Section)		N520F
		N520C
VF Metal Jacketed Gasket (All Covered)		N6520
VF Metal Jacketed Gasket (Double Covered)		N6580

## • Materials

Metal Jacketed Gaskets consist of a core material covered in a metal layer. A VALQUAFOIL surface material may also be applied. Tape Seal (No.20) surface wrapping is also available upon request.

Component	Material		Frequency of Use											
	Name	Maximum Hardness(Hv)												
Sheet Metal	Low Carbon Steel	140												
	Copper	80												
	SUS304	180												
	SUS304L	170												
	SUS316	180												
	SUS316L	170												
	SUS321	180												
	SUS347	180												
	SUS410	190												
	5Cr-0.5Mo Steel	150												
	Brass	130												
	Monel Metal	150												
	Titanium	180												
	Nickel	150												
	Aluminum	40												
	Lead	10												
Core Material	Non-Asbestos Plate <sup>(1)</sup>													
	VALFLON Sheet(PTFE)													
Surface Material	Gathered Tape with Adhesive(No.VF-70) Or VALQUAFOIL Sheet(No.VF-30)													

Note(1) Non-Asbestos is a registered trademark product manufactured and sold by VALQUA.

■Flange Surface Roughness (reference)  
The recommended flange surface roughness is 1.6a (Ra). However, this value may be adjusted based on the desired sealing level and fluids involved.

## • Range of Available Sizes

Metal Jacketed Gaskets have no maximum size limits. The largest size on record is 8040mm in outer diameter. Due to transportation limitations, sizes beyond 3500mm in outer diameter will be manufactured on-site.

## ■ Manufacturing Process of Metal Jacketed Gaskets for Heat Exchangers

Asbestos-free materials, typically available in 1000mm×1000mm dimensions, are often used as the core material for Metal Jacketed Gaskets. This core material must be patched together in multiple locations to manufacture larger sized gaskets. To minimize patch sites and increase gasket reliability, long strips of the core material are cut in a spiral manner at a specified width (10~25mm for heat exchange rings).

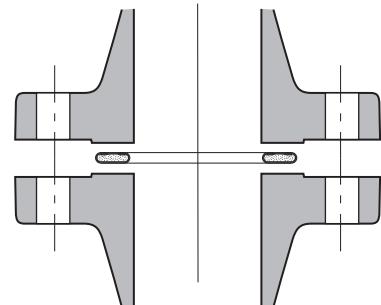

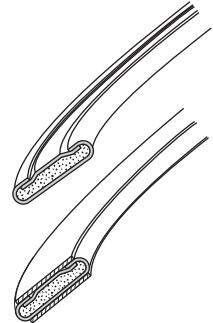

●No.N520, No.N6520, No.N580, No.N6580 are used as gaskets with ribs for multi-path tubular heat exchangers. The gasket ribs may be made to various configurations, but the minimum corner radius is 10mm (ID) for 3mm, 3.2mm thicknesses.

## • Metal Jacketed Gasket All Covered

### VALQUA No.N520

### VALQUA No.N6520

VF Metal Jacketed Gasket

No.N520 consists of a non-asbestos core material covered with two thin sheets of metal.

No.N6520 is a variation of No.N520 by applying VALQUAFOIL gathered tape or sheet(VF-70, VF-30, respectively) for improved seal performance.

#### ●Standard Dimensions

JPI and ASME pipe Flanges: Conforms with ASME B 16.5, JPI-7S-15 standards for Class 150, Class 300(see page 38).

Other dimensions and configurations are also available.

Remarks 1. For narrow widths of less than 5mm the cross sectional configuration will be as shown below.

2. Standard thickness is 3mm but may be adjusted upon request.

#### ●Related Standards

ASME B16.5, JPI-7S-15

#### ●Reference Standards

JIS B2238/2239, JPI-7S-43

#### ●Applications

Metal Jacketed Gaskets are utilized where high temperatures and pressures do not allow for the use of non-metal gaskets. No.N520 is commonly used in the oil refining and petrochemical industries for heat exchangers that handle gases, oil gases and solvent fumes. Other applications include pressure vessel covers, valve bonnets, tower and tank connections, internal combustion engines, and cylinder head covers for compressors.

No.N6520 is ideal for applications requiring complete sealing or prohibiting the use of gasket pastes.

## • Metal Jacketed Gasket Corrugated, All Covered

### VALQUA No.N510

No.N510 is a gasket similar to No.N520 but with a corrugated cross section. Complete sealing is assured with low tightening load. The corrugated configuration also exhibits some pressure relieving effects observed in Labyrinth seals.

#### ●Dimensions and Cross Sectional Configurations

Dimensions for a flat ring configuration are as shown below.

Range of Gasket OD(D)	Pitch(P) Gasket Width(W)	Pitch				Thickness (T)
		10<W ≤16	16<W ≤25	25<W ≤40	40<W ≤60	
D ≤ 100	3	3	3	—	—	3
100 < D ≤ 160	3	4.5	4.5	4.5	4.5	
160 < D ≤ 250	4.5	4.5	4.5	6.5	6.5	
250 < D ≤ 400	4.5	4.5	6.5	6.5	6.5	
400 < D ≤ 630	4.5	6.5	6.5	6.5	6.5	
630 < D ≤ 1,000	4.5	6.5	6.5	6.5	6.5	
1,000 < D ≤ 1,600	—	6.5	6.5	6.5	6.5	

Remark The minimum inner diameter is 13mm.

#### ●Related Standards

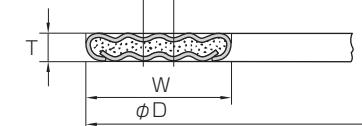

ASME B16.20, ASME B16.5

#### ●Reference Standards

JIS B2238/2239

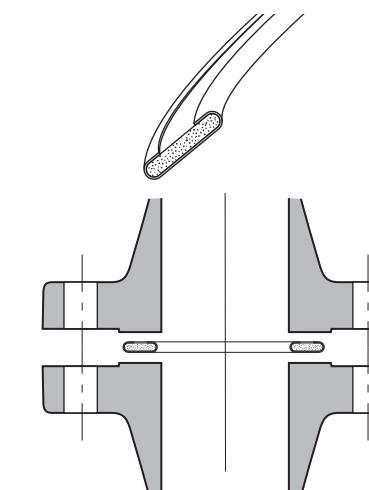

#### ●Applications

No.N510 is utilized in oil refining and chemical industries involving steam, heated oils, oil gases and solvent vapors for raised, grooved and male & female pipe flanges. It may also be used in covers for valve bonnets, pressure vessels, towers and tanks.

## • Metal Jacketed Gasket Half Covered

### VALQUA No.N530

No.N530 is a gasket where the core material is covered with a thin metal sheet on one side. For applications requiring small diameters or narrow and flat sections No.N520 or No.N580 is not recommended.

#### ●Dimensions and Cross Sectional Configurations

No.N530 can be configured as requested.

#### ●Related Standards

ASME B16.5

#### ●Reference Standards

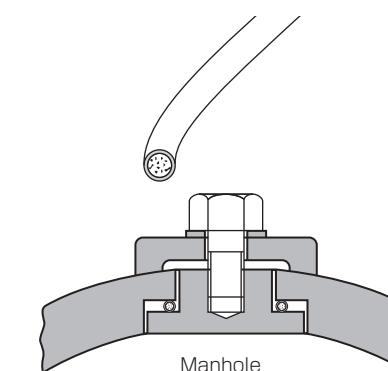

JIS B2238/2239

#### ●Applications

No.N530 is utilized for boiler manholes or hand holes, steam traps, sight glasses and ignition plugs for internal combustion engines. For applications requiring round or flat shaped cross sections No.N570 may be used.

## • Metal Jacketed Gasket Circle, All Covered

### VALQUA No.N570

No.N570 is a gasket formed by wrapping a thin metal sheet around a strip of core material and finished into a round cross section. Various cross sectional configurations such as oval, ellipse, square, diamond and pear shapes are possible.

#### ●Dimensions and Cross Sectional Configurations

Round, oval and rectangular shapes are available in requested sizes.

#### ●Applications

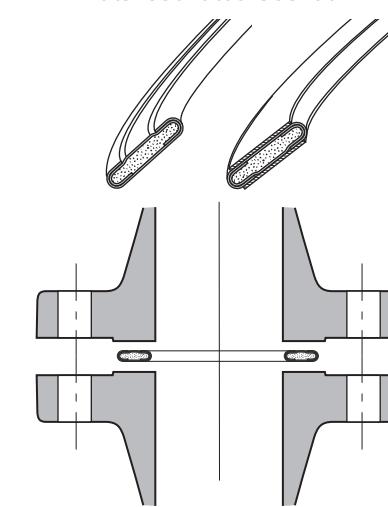

No.N570 can be utilized for manholes or headers in water pipe boilers, steam traps, sight glasses and internal combustion engines where space is required.

## • Metal Jacketed Gasket Double Covered

### VALQUA No.N580

### VALQUA No.N6580

VF Metal Jacketed Gasket

No.N580 is a flat gasket with two thin metal sheets wrapped around the core material. The upper sheet is folded, overlapping into the lower sheet. For large sized gaskets in horizontal machines, the No.N580 may be selected over the No.N520 for greater reliability. No.N6580 is a N580 gasket with VALQUAFOIL gathered tape or sheet(VF-70, VF-30 respectively) applied to both sides for improved seal performance.

#### ●Dimensions and Cross Sectional Configurations

The Double Covered Metal Jacketed Gasket can be configured as requested.

#### ●Reference Standards

ASME B16.5, JIS B2238/2239

#### ●Applications

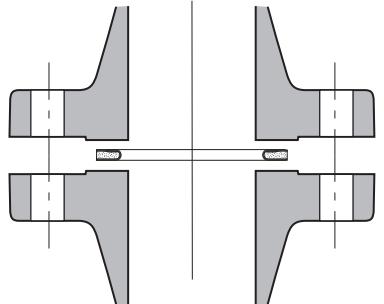

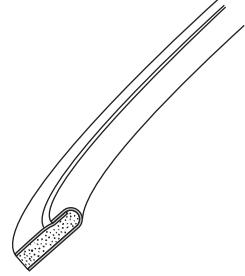

No.N580 and No.N6580 gaskets may be used in environments with the same or harsher temperatures and pressures than that of No.N520. Applications include pipe flanges, large size pressure vessels, towers and tanks.

No.N6580 is ideal for applications requiring complete sealing or prohibiting the use of gasket pastes.

## • Metal Jacketed Gasket French Cross Section

### VALQUA No.N520F

### VALQUA No.N520C

### No.N520F

### No.N520C

No.N520F consists of a Non-Asbestos Plate, Non-Asbestos Joint Sheet, or a combination of both, wrapped with a thin metal sheet in a "C" shaped cross section. Two types of configurations are available depending on the malleability of the metal material used.

No.N520C is a sheet gasket such as the Non-Asbestos Joint Sheet with a thin metal cover on the inner diameter side(grommet processing).

#### ●Dimensions

This product can be manufactured as requested.

#### ●Related Standards ASME B16.5

#### ●Reference Standards JIS B2238/2239

#### ●Applications

Applications include cylinder head covers for compressors and internal combustion engines, exhaust joints, sight glasses, valve bonnets and other locations requiring a custom shape. Also applicable towards locations such as polymerization reactor lids where VALFLON Jacketed Gaskets cannot be used.

Below are configurations and materials especially suited for polymerization reactors.

VALQUA Part No.	Cross Sectional Configuration	Applications
N520F-ZXP	 	Chloroprene,Vinyl Chloride or AS Resin used in polymerization reactors
	 	Polymerization of Styrene Resin
N520F-ZXA	 	Polymerization of Styrene Resin

Soft Non-Asbestos Plate, SUS316, Degreased  
Or  
· The description would become : VALQUA No.N520-Circle-Soft Non-Asbestos Plate-SUS316-Degreased  
· VALQUA No.N520-Z7GB

### ■ Size Description

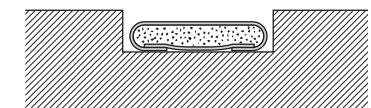

For orders with standard dimensions(see page 38), please specify the flange, configuration and diameter.

Flange	Configuration	Diameter
		ASME or JPI Class 150 Raised Face : 150
		ASME or JPI Class 300 Raised Face : 300

(Example) 150NW-3

For applications outside these standard specifications, please provide configurations and dimensions.

Gaskets No.N520, No.N6520, No.N580, No.N6580 for heat exchangers consist of a flat surface and a folded surface. Please provide clear drawings specifying appropriate sides and views for non-symmetric designs. When installed, the side with overlapping sheets should be on the bottom as shown to the right.

# Metal Corrugated Gasket

## VALQUA No.500

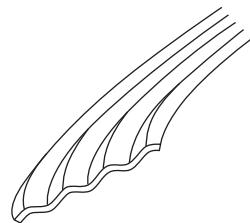

No.500 is a metal gasket made of a thin, corrugated metal sheet. It is appropriate for joint areas involving high temperatures and low pressure fluids.

### • Product Types

Name	Cross Sectional Configuration	VALQUA Part No.
Metal Corrugated Gasket		500

### • Metal Corrugated Gasket

#### VALQUA No.500

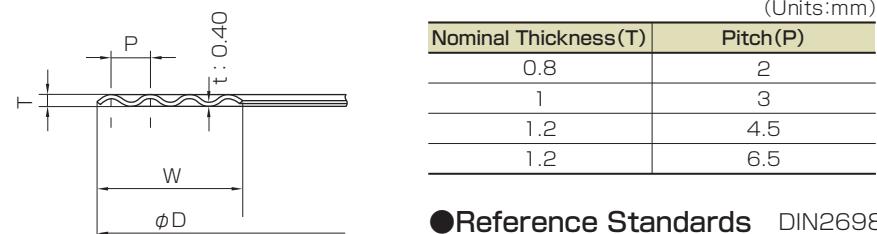

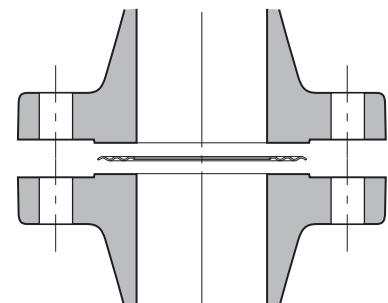

No.500 is made of low carbon steel or stainless steel (such as SUS304). It seals under low pressures similar to Asbestos Joint Sheet gaskets, and its heat resistance is greater than Metal Jacketed Gaskets. These qualities allow No.500 to be used for class 150 and 300 globe, gate and check valve bonnets.

#### ● Dimensions and Configurations

Round, oval, and rectangular shapes are available.

Dimensions of round shaped gaskets are shown below.

OD Classification(D)	Pitch(P)				
	Gasket Width(W)	Pitch 10<W ≤ 16	Pitch 16<W ≤ 25	Pitch 25<W ≤ 40	Pitch 40<W ≤ 60
D ≤ 100		2	3	3	3
100 < D ≤ 160		3	3	3	3
160 < D ≤ 250		3	3	4.5	4.5
250 < D ≤ 400		3	3	4.5	4.5
400 < D ≤ 630		3	4.5	4.5	6.5
630 < D ≤ 1,000		3	4.5	6.5	6.5
1,000 < D ≤ 1,600		3	6.5	6.5	6.5

Remark Minimum gasket inner diameter is 13mm.

Nominal Thickness(T)	Pitch(P) (Units:mm)
0.8	2
1	3
1.2	4.5
1.2	6.5

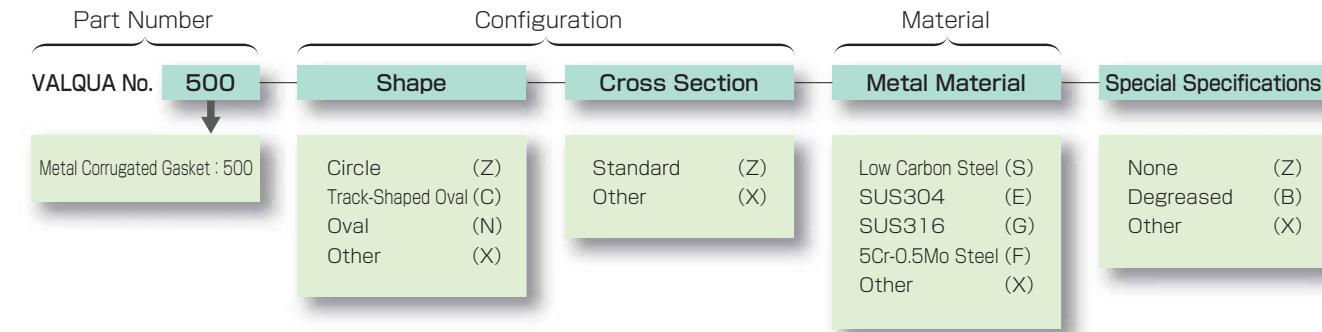

#### ● Reference Standards DIN2698

#### ● Applications

Used in various valve bonnets for high temperature/low pressure steam, oil gases, solvent vapors, and thermal oils.

### • Ordering Information for Metal Corrugated Gaskets

#### ■ Part Number, Configuration and Material Chart

Remarks 1. Configuration, material, and special conditions may be specified using alphanumeric codes shown in parenthesis.

2. For configurations and materials not listed, please consult VALQUA.

#### ■ Size Description

Please specify gasket configurations and dimensions.

# Metal Flat Gasket and Serrated Gasket

## VALQUA No.540/560

The Metal Flat Gasket is a simple, economical gasket made from rolls of sheet metal to manufacture specified gasket shapes and sizes. The Serrated Gasket's surface is jagged to minimize the effective contact area and improve seal efficiency. Both seals are used in high temperature/high pressure valve bonnets, pipe flanges and cover gaskets for pressure vessels.

### • Product Types

Name	Cross Sectional Configuration	VALQUA Part No.
Metal Flat Gasket		560
Serrated Gasket(Outer Wing Cross Section)		
Serrated Gasket(Inner Wing Cross Section)		
Serrated Gasket(Wingless Cross Section)		
Serrated Gasket (Outer and Inner Wing Cross Section)		
Kammprofile Gasket	VALQUAFOIL Sheet 	6540H
	VALQUAFOIL Sheet 	6540HP

### • Materials

○ : frequently used ○ : used with some frequency △ : used only for custom applications

■ Flange Surface Roughness(reference)  
The recommended flange surface roughness is 1.6a(Ra).  
However, this value may be adjusted based on the desired sealing level and fluids involved.

### • Range of Available Sizes

#### ■ Maximum OD of Single Sheet Gaskets

Production limits of single sheet gaskets are as follows.

Please note that values may vary depending on material availability.

(Units:mm)

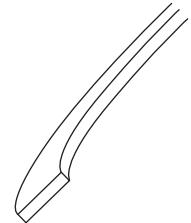

Material	Max. OD of Single Sheet Gasket <sup>(1)</sup>	Material	Max. OD of Single Sheet Gasket <sup>(1)</sup>
Low Carbon Steel	1500	SUS410	1200
Soft Iron	2000 <sup>(2)</sup>	SUS430	1200
Copper	1200	5Cr-0.5Mo Steel	1200
SUS304	1200	Monel Metal	1200
SUS304L	1200	Titanium	1200
SUS316	1200	Silver	200
SUS316L	1200	Hastelloy B	1000
SUS321	1200	Aluminum	1200
SUS347	1200	Lead	1500

Notes(1) Maximum production size without welding.

(2) Manufactured with forged and heat treatment materials.

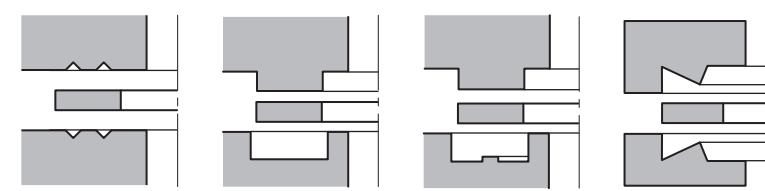

### • Metal Flat Gasket

#### VALQUA No.560

No.560 is a machine finished gasket made from rolls of sheet metal to customer specifications.

Seal performance and pressure resistance may be improved by using the product with a flange with concentric V-shaped grooves or processed nubbins.

#### ● Dimensions and Configurations

This product can be manufactured as requested. If not specified, a nominal thickness of 3mm is applied.

#### ● Related Standards

ASME B 16.5, DIN 2695

#### ● Reference Standards

JIS B 2238/2239

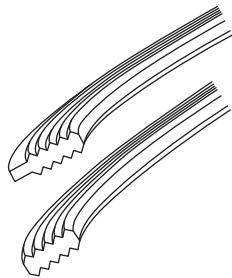

#### ● Applications

No.560 may be utilized in pipe flanges for high temperature/high pressure steam or process lines, tanks, vessels, heat exchangers, autoclaves and valve bonnets. It is applicable to raised faced, grooved, and male & female joints. No.560 has been used for knife edge shaped grooves in bakeable flanges of vacuum equipment. For such cases, JIS H 3100 Oxygen Free Copper Plate C1020P-1/2H or an equivalent or higher Oxygen Free Copper Plate ASTM F68 Class 1 material is used.

For standard dimensions, please see page 39.

## • Serrated Gasket

### VALQUA No.540

No.540 is a serrated gasket made from rolls of sheet metal or bars. It has excellent sealing performance and pressure resistance, but the jagged surface may scratch the flange. Retouching the flange surface upon gasket replacement is recommended.

#### ● Standard Dimensions

JIS Pipe Flange: Outer Wing Cross Section dimensions are determined based on JIS B 2202-1984 pipe flange gasket standards(10K,16K,20K,40K, 63K) (see page 44).

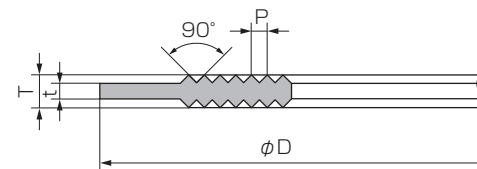

JPI and ANSI Pipe Flange: Standard Outer Wing Cross Section dimensions are determined based on ASME/ANSI B 16.5-1988 (classes 150, 300, 600, 900) (see page 45).

#### ● Non-Standard Dimensions and Configurations

Dimensions of round shaped gaskets are shown below.

(Units:mm)			
OD Classification(D)	Pitch(P)	Nominal Thickness(T)	Wing Thickness(t)
D ≤ 100	1	3	2
100 < D ≤ 250		4.5	3
250 < D ≤ 630		6	4.5
630 < D ≤ 1600		8	6

Gaskets outside of the above mentioned specifications are available upon request.

#### ● Related Standards

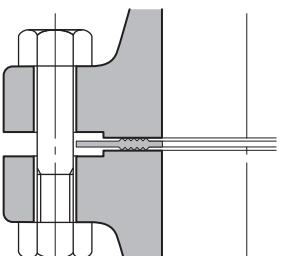

ASME B16.5, DIN 2697

#### ● Reference Standards

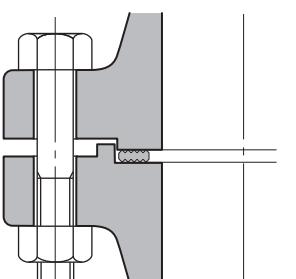

JIS B 2238/2239

#### ● Applications

No.540 is utilized in high temperature/high pressure raised face and male & female pipe flanges, pressure vessels, tanks, towers and valve bonnets. It may also be used for screw-in locations requiring low friction.

(Inner and Outer Wing Cross Section)

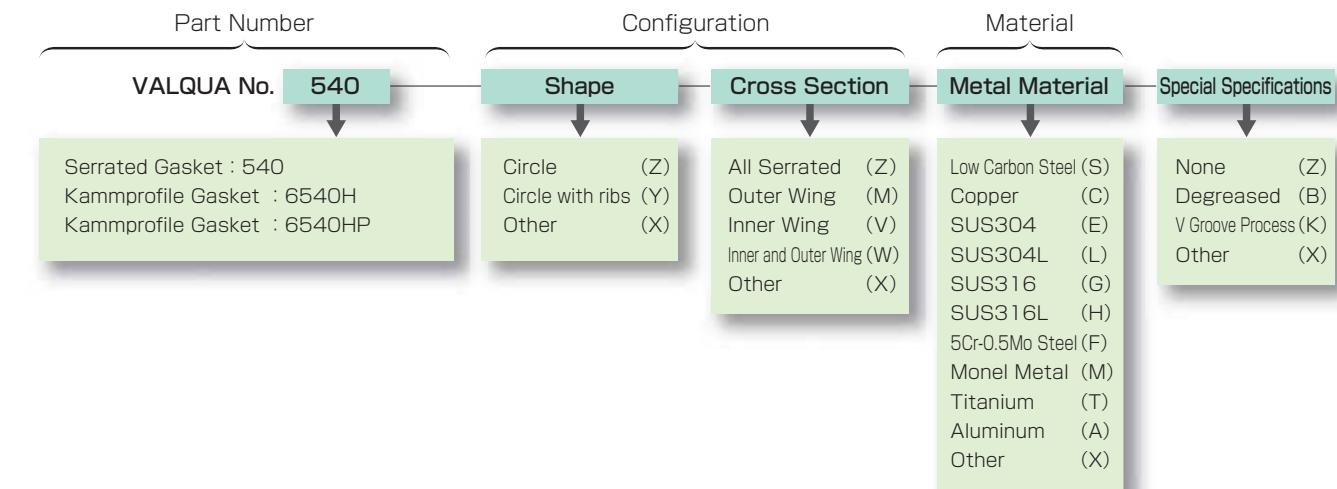

(Wingless Cross Section)

# Ring Joint Gasket

## VALQUA No.550 Series

Ring Joint Gaskets are pressure-energized gaskets. It can be used in pipe flanges, pressure containers and valve bonnets handling high temperature/high pressure steam, gases, hot oils, oil gases and solvent vapors. These gaskets can reduce the strength required by bolts and flanges compared to simple compression metal gaskets.

### • Product Types

Name	Cross Sectional Configuration	VALQUA Part No.

## • Ring Joint Gasket Oval and Octagonal Type Cross Sections

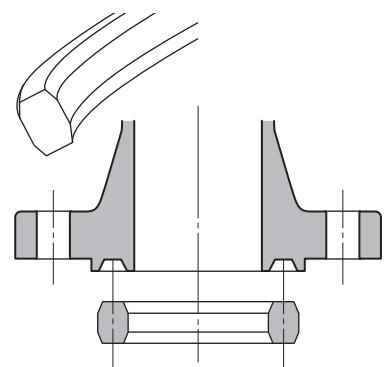

### VALQUA No.550-ZO

Oval Cross Section

### VALQUA No.550-ZS

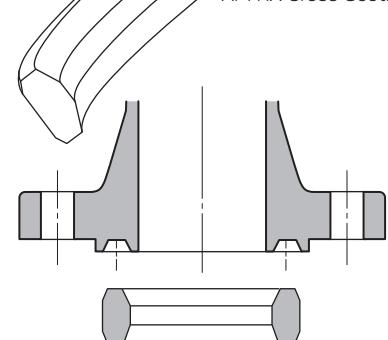

Octagonal Cross Section

## • Ring Joint Gasket API-RX and API-BX Type Cross Sections

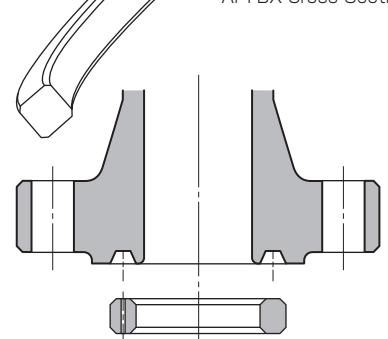

### VALQUA No.550-ZA

API-RX Cross Section

### VALQUA No.550-ZP

API-BX Cross Section

No.550-ZO is a metal ring with an oval shaped cross section, and No.550-ZS has an octagonal shaped cross section. Dimensions and materials are standardized according to JPI-7S-23 or ASME B16.20 standards. These gaskets are for ring joint face flanges specified in JPI-7S-15, ASME B16.5, API SPEC 6A, MSS SP-44, and BS 1560 standards.

#### ●Standard Dimensions

JPI-7S-23-83 class 150-2500 standards are applied to JPI, API, ASME, and MSS pipe flanges.

#### ●Related Standards

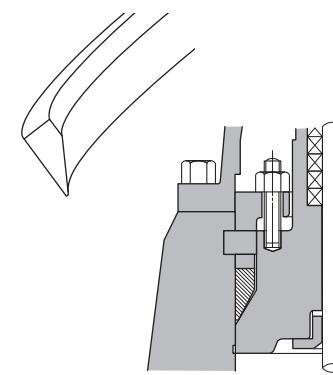

ASME B16.5, API SPEC 6A, JIS F 7102 (520SR), MSS SP-44, BS 1560, JPI-7S-15

#### ●Applications

These gaskets are utilized in numerous applications such as petroleum and petrochemical industries, for thermal power generation and steam turbines on vessels. Uses also include flanges, valve bonnets, pressure containers, towers and vessels handling high temperature/high pressure steam, gases, hot oils, oil gases, solvent vapors, and Oxygen.

## • Improved Bridgeman Gasket

### VALQUA No.550-ZB

No.550-ZB is a unique self-sealing gasket which applies P.W. Bridgeman's "Unsupported Area Principle". Downward pressure on the edge face of the floating head increases the tension force.

The joint structure requires some precision, but bolts and flanges will only have to withstand the stresses from the edge faces.

For Soft Iron and Low Carbon Steel gaskets, silver plating may be applied to better conform to the opposing surface while preventing adhesion.

#### ●Dimensions and Cross Sectional Configurations

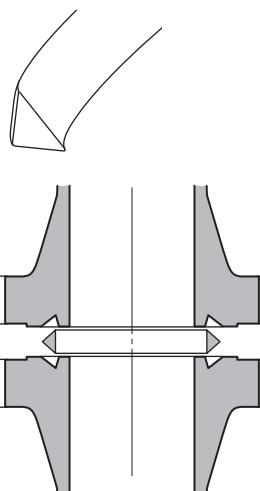

Requested dimensions are available, provided the configuration is a ring.

#### ●Applications

No.550-ZB is used for cover packings of valve bonnets, heat exchangers, and autoclaves of high temperatures and high pressures of 9.8MPa {100kgf/cm<sup>2</sup>} or more.

## • Delta Ring

### VALQUA No.550-ZD

No.550-ZD is a self-sealing gasket with a triangular cross section. It can be used for pressure container covers and valve bonnets up to pressures of 34.3MPa{350kgf/cm<sup>2</sup>}.

For improved sealing performance, silver plating may be used.

#### ●Dimensions and Cross Sectional Configurations

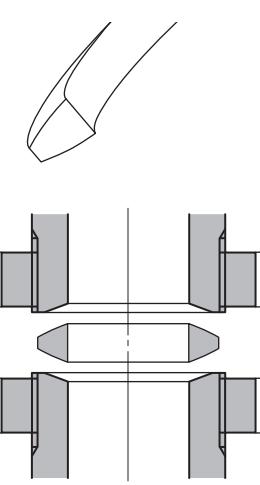

Requested dimensions are available, provided the configuration is a ring.

#### ●Applications

No.550-ZD is used for high temperature/high pressure autoclaves and heat exchanger covers and valve bonnets.

## • Lens Ring

### VALQUA No.550-ZL

No.550-ZL is a gasket with a cross section similar to that of a convex lens. The self-sealing gasket seals at a line contact with the cone shaped flange angled at 20 degrees.

#### ●Dimensions and Cross Sectional Configurations

Requested dimensions are available, provided the configuration is a ring. Production is based on MSS SP-65 or DIN 2696 standards.

#### ●Related Standards

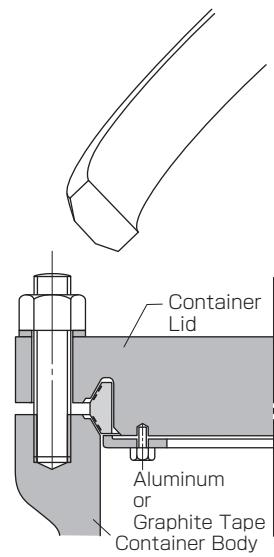

MSS SP-65, DIN 2696

#### ●Applications

No.550-ZL has been used for pipe flanges and pressure container covers for high temperature/high pressure ammonia and methanol compound lines. It has also been used for 294 MPa{3000kgf/cm<sup>2</sup>}high pressure polyethylene polymer lines.

## • Double Cone Shaped Metal Gasket

### VALQUA No.550-ZW

No.550-ZW is a self-sealing gasket with a double cone shaped cross section. When Low Carbon Steel is used, an Aluminum board or Graphite tape is often used to ensure a seal. This method alleviates the need for a precisely finished surface and also does not damage the surface.

#### ● Dimensions and Cross Sectional Configurations

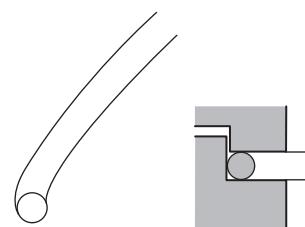

Requested dimensions are available, provided the configuration is a ring.

#### ● Applications

No.550-ZW is utilized in covers for high temperature/high pressure vessels and heat exchangers.

## • Circle Shaped Metal Gasket

### VALQUA No.550-ZR

No.550-ZR is a gasket with a circle cross section and is often used for small, high pressure joint locations.

#### ● Dimensions and Cross Sectional Configurations

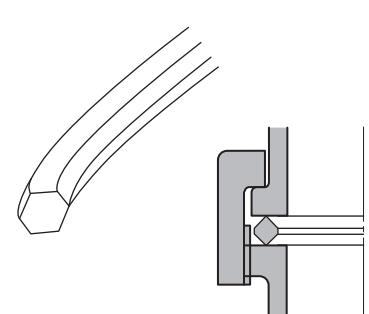

This product can be manufactured as requested.

#### ● Applications

No.550-ZR is used for valve bonnets, compressors, vacuum pumps, reactors, high pressure unions, and joint nipple locations.

## • Diamond Shaped Metal Gasket

### VALQUA No.550-ZE

No.550-ZE is a small metal ring with a diamond cross section, often used in locations tightened by twisting such as joint nipples.

#### ● Dimensions and Cross Sectional Configurations

Requested dimensions are available, provided the configuration is a ring.

#### ● Applications

No.550-ZE is used in high temperature/high pressure manometer mounts and nipple shaped joints.

## • Ordering Information for Ring Joint Gaskets

Remarks 1. Configuration and material, and special specifications may be specified using alphanumeric codes shown in parenthesis.  
2. For configurations and materials not listed, please consult VALQUA.

(Example) For Ring Joint Circle, Oval Cross Section, SUS304L, Degreased  
Or · The description would become: VALQUA No.550 - Circle-Oval Type-SUS304L-Degreased  
· VALQUA No.550 - ZOLB

### ■ Size Description

For Oval, Octagonal, API-RX, API-BX type Ring Joint Gaskets, please specify the ring number (see pages 46~49).

(Example) R-50

For other sizes, please specify the configuration and dimensions.

# Blind Plate and Holding Ring

## VALQUA No.555 Series

The No.555 series allows pipe opening and closures by installing blind plates or holding rings in place of oval or octagonal Ring Joint Gaskets. These products are designed and manufactured to meet customer specific application requirements.

### • Product Types

Name	Cross Sectional Configuration	VALQUA Part No.
Blind Plate (Oval Cross Section)		555-60
Holding Ring (Oval Cross Section)		555-70
Combination of Blind Plate and Holding Ring (Oval Cross Section)		555-80
Blind Plate (Octagonal Cross Section)		555-6S
Holding Ring (Octagonal Cross Section)		555-7S
Combination of Blind Plate and Holding Ring (Octagonal Cross Section)		555-8S
Blind Plate (Flat Cross Section)		555-6P
Holding Ring (Flat Cross Section)		555-7P
Combination of Blind Plate and Holding Ring (Flat Cross Section)		555-8P

### ● Materials

Materials are based on oval and octagonal Ring Joint Gaskets (see page 25).

### ● Dimensions

Requested dimensions are available, provided the configuration is a ring.

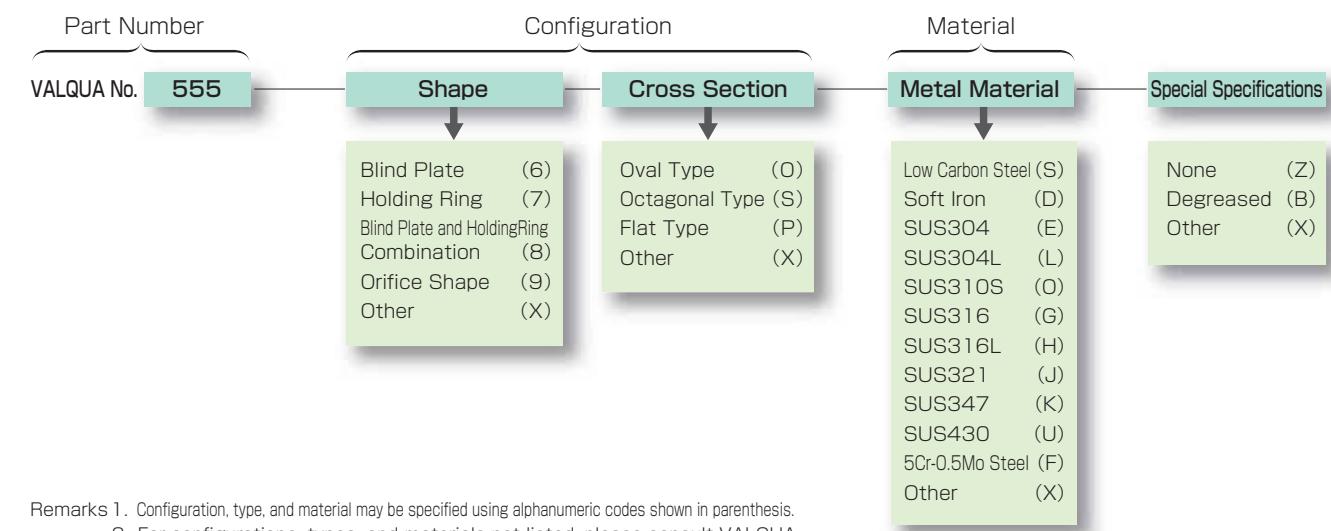

### ● Reference Standards

JPI-7S-23, API STD 600

Remark Pipe diameters in the figures above are not to scale.

### • Ordering Information for Blind Plate and Holding Ring

#### ■ Part Number, Configuration and Material Chart

Remarks 1. Configuration, type, and material may be specified using alphanumeric codes shown in parenthesis.

2. For configurations, types, and materials not listed, please consult VALQUA.

(Example) For Blind Plate(Octagonal Type), SUS316L, No Special Specifications  
Or · The description would become:Valqua No.555 - Blind Plate-Octagonal Type-SUS316L  
· VALQUA No.555-6SHZ

#### ■ Size Description

(1) For oval and octagonal cross section types

Please specify the ring number (see pages 46~49) and flange.

Ring Number	Flange
	ASME of JPI Class 150 : 150
//	300 : 300
//	400 : 400
//	600 : 600
//	900 : 900
//	1500 : 1500
//	2500 : 2500

(Example) R20-600  
For special specifications, please indicate the configuration and dimensions.

(2) For flat types

Please specify the flange and diameter.

(3) For orifice plates

Please specify the configuration and dimensions with a drawing.

# Other Metal Gaskets

## VALQUA No. 550 Series

These gaskets are designed and manufactured to meet customer specific application requirements. Please consult Valqua.

### • Product Types

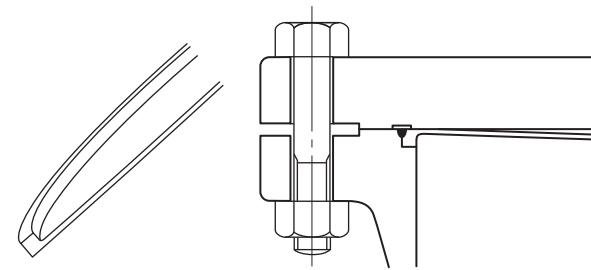

Name	Cross Sectional Configurations	VALQUA Part No.
Diaphragm Cross Section Plate		550-ZX
Canopy Seal		550-ZX
Sealing Membrane		550-ZX
Omega Seal Ring		550-ZX
Seal Plate		550-ZX

### • Materials

Please consult VALQUA for options.

### • Diaphragm Cross Section Plate

#### VALQUA No.550-ZX

• Diaphragm Cross Section Plate

No.550-ZX is used in heat exchanger covers for high temperature/high pressure lines. Leaks will not occur as it is welded to the body.

#### ● Dimensions and Cross Sectional Configurations

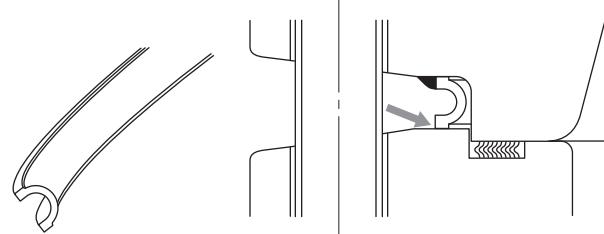

Requested dimensions are available, provided the configuration is a ring.

#### ● Applications

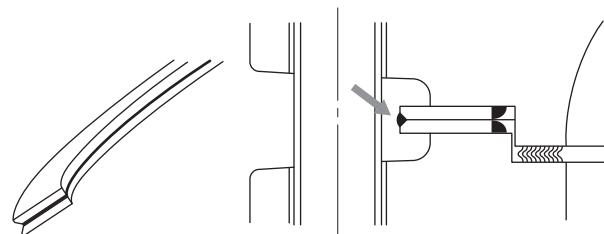

No.550-ZX is mainly utilized as a cover gasket for high pressure heat exchangers for Ammonia compound lines.

### • Canopy Seal / Sealing Membrane / Omega Seal Ring / Seal Plate

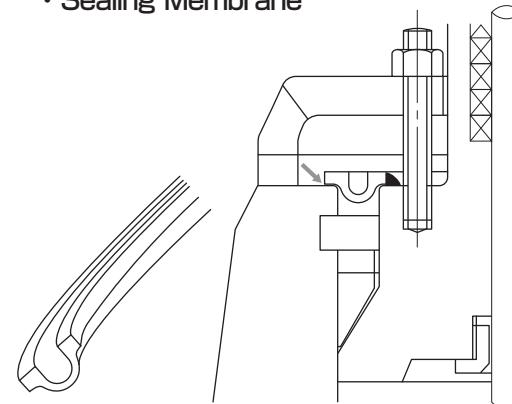

#### VALQUA No.550-ZX

• Canopy Seal

• Sealing Membrane

• Omega Seal Ring

The Canopy Seal is an emergency seal with a C shaped cross section. The Sealing Membrane is an emergency seal consisting of two flat metal gaskets with tapered ends stacked on top of each other.

Both are used in valve bonnets and casing covers for pumps, with one section welded to the body as shown in the figures. In the case of an emergency, the locations indicated with an arrow can then be welded on-site.

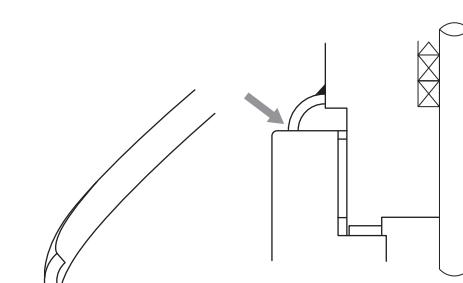

Larger high temperature/high pressure valves often incorporate the Omega Seal Rings, and smaller valves use Seal Plates.

#### ● Dimensions and Cross Sectional Configurations

Requested dimensions are available, provided the configuration is a ring.

#### ● Applications

No.550-ZX is used in valve bonnets for light-water reactor nuclear power plants using coolants or other hazardous materials and chemical plants handling toxic materials. It is also used as casing covers for heat exchangers and pumps.

• Seal Plate

## Gasket Dimension Tables

- TRYPACK ..... 35
- Metal Hollow O-Ring ..... 36
- Metal Jacketed Gasket/Metal Jacketed Gasket with VALQUAFOIL ..... 38
- Metal Flat Gasket ..... 43
- Serrated Gasket ..... 44
- Ring Joint Gasket ..... 46

Remarks 1. These VALQUA dimensions are based on the JIS B 2210(1968)JIS B 2210(1984) and JPI-7S-15-93 standards.

2. Please process the flange face to accommodate use of TRYPACK, as the product used alone will require a groove. When utilizing a flat face flange, use with a retainer is recommended.

3. For standardized flanges, tightening load requirements may change depending on pressures and bolt materials. Refer to Standard Tightening Torque Calculations(page 5).

4. Table values are based on open OD configurations. For information concerning open ID configurations, please consult VALQUA.

5. Other cross sectional diameters such as 1.7, 2.6, 8.0, 10.0 etc. are also available.

## • Metal Hollow O-Ring

Both Standard and Balanced Metal Hollow O-Rings can be classified into twelve standard dimensions based on cross sectional diameter and wall thickness.

### ■ Standard(No. 3640)and Balanced(No. 3641)Types

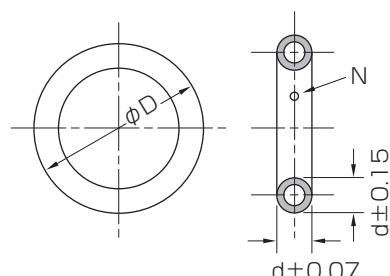

#### ● For 1.6mm Diameter(d)Tubes (Units : mm)

Tube Code	Tube Diameter x Wall Thickness

Remark VALQUA defined dimensions

## • Metal Jacketed Gasket and Metal Jacketed Gasket with VALQUAFOIL

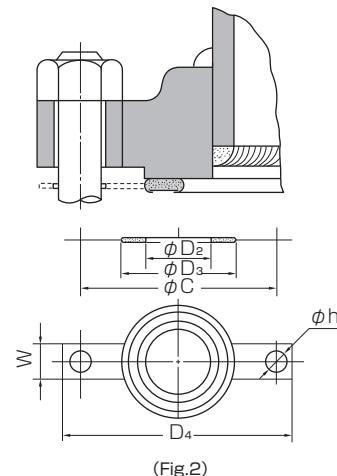

Dimensions shown below are for 3mm thick All Covered gaskets. Other gasket thicknesses can also be accommodated. The Metal Jacketed Gasket with VALQUAFOIL is an All Covered Metal Jacketed Gasket(No. N520)with 0.4mm thick VALQUAFOIL(graphite), gathered tape(VF-70)or sheet(VF-30)applied to both sides.

### ■ All Covered Gaskets(No. N520 and No. N6520)

Standard Metal Jacketed Gasket

Metal Jacketed Gasket with Holder

Remarks  
1. Gaskets come standard with 0.4mm thick holders attached. Please specify if holders are not needed.  
2. Unless otherwise specified, the holder will be made of the gasket material. If another material is desired, please consult VALQUA.

Notes (1) Dimensional tolerance is (-0.38)

(2) Dimensional tolerance is (+0.39)

Remarks 1. These dimensions are based on the API SPEC 6A(1989) standards.

2. Applicable flanges include: API SPEC6A(1989)- 6B, Segment Flanges, and Clamp Connectors.

### ■ API-BX Cross Section(No. 550-ZP)

# Product Packaging Metal Material Color Chart

Many metal materials are used in our metal and semimetallic gaskets. VALQUA utilizes a color coded identification system to prevent inadvertent mixing of materials. This system is also used in product packaging to aid in inventory control and proper gasket selection.

## For VALQUA No.550-ZO and No.550-ZS

For OD values less than or equal to 350mm, the gaskets are vacuum packed, placed in boxes, and identified with major classification colors. All other products are wrapped with major classification color tape for easy identification and affixed with a sub classification color label stamped with the material name.

Metal Material	Color		VALQUA Material Code	Color Label Example
	Major Classification	Sub Classification		
Soft Iron	Blue	Blue	D	Soft Iron
Low Carbon Steel		White	S	Low Carbon Steel
5Cr-0.5Mo Steel		Red	F5	ASTM F5
1.25Cr-0.5Mo Steel		Brown	F11	ASTM F11
Other Metals		Orange	—	
SUS 304		Yellow	304	SUS 304
SUS 304L		Pink	304L	SUS 304L
SUS 316		Brown	316	SUS 316
SUS 316L		Green	316L	SUS 316L
SUS 321		White	321	SUS 321
SUS 347	Yellow	Blue	347	SUS 347
Other Stainless Steels		Orange	—	
Copper		Green	Cu	Copper
Monel Metal		Brown	M	Monel Metal
Nickel	Pink	Brown	Ni	Nickel
Titanium		White	Ti	Titanium

## Packaging for Other Products

Packaging for products other than Ring Joint Gaskets will vary according to gasket type, configuration, dimension and order quantity.

Products are packed using transparent or craft paper tape and classification color coded with twine. Sub classification colors are used during the manufacturing process.

Metal Material	Color		Metal Material	Color	
	Major Classification	Sub Classification		Major Classification	
Soft Iron	Blue	Blue	Soft Iron	Copper	
Low Carbon Steel		White	Low Carbon Steel	Brass	
0.5Mo Steel		Yellow	0.5Mo Steel	White Copper

# Index

VALQUA Part No.	Product Name	Reference Page
500	Metal Corrugated Gasket	18
N510	Metal Jacketed Gasket(Corrugated, All Covered)	14
N520	Metal Jacketed Gasket(All Covered)	14
N520C	Metal Jacketed Gasket(French Cross Section Type)	16
N520F	Metal Jacketed Gasket(French Cross Section Type)	16
N530	Metal Jacketed Gasket(Half Covered)	15
540	Serrated Gasket	22
550-ZB	Improved Bridgeman Gasket	27
550-ZD	Delta Ring	27
550-ZX	Other Metal Gaskets	32
555-ZL	Lens Ring	27
550-ZO	Ring Joint Gasket(Oval Cross Section)	26
550-ZR	Circle Shaped Metal Gasket	28
550-ZS	Ring Joint Gasket(Octagonal Cross Section)	26
550-ZA, ZP	Ring Joint Gasket(API-RX, BX Cross Section)	26
550-ZW	Double Cone Shaped Metal Gasket	28
555-60	Blind Plate (Oval Cross Section)	30
555-70	Holding Ring(Oval Cross Section)	30
555-80	Combination of Blind Plate and Holding Ring(Oval Cross Section)	30
555-6P	Blind Plate(Flat Cross Section)	30
555-7P	Holding Ring (Flat Cross Section)	30
555-8P	Combination of Blind Plate and Holding Ring(Flat Cross Section)	30
555-6S	Blind Plate (Octagonal Cross Section)	30
555-7S	Holding Ring(Octagonal Cross Section)	30
555-8S	Combination of Blind Plate and Holding Ring (Octagonal Cross Section)	30
560	Metal Flat Gasket	21
N570	Metal Jacketed Gasket(Circle, All Covered)	15
N580	Metal Jacketed Gasket(Double Covered)	15
3640	Metal Hollow O-Ring(Standard Type)	8
3641	Metal Hollow O-Ring(Balanced Type)	8
3645	TRYPACK	2
6520	Metal Jacketed Gasket with VALQUAFOIL(All Covered)	14
6580	Metal Jacketed Gasket with VALQUAFOIL(Double Covered)	15
